

verifypasswd

To start Verify a password in the profile section for Source application (eg: Salesforce and Microsoft CRM) connection or Database connection. If result is verified then it will show the message "password is correct" otherwise it will show "password is incorrect".

Usage

```
admin (.bat or .sh) verifypasswd <<profile>> <<options>>
```

profile: the profile as set in DBSync

options:

application.password=<<password>>

db.password=<<password>>

While using the command line in windows, parameter with equal (=) operator has to be enclosed in double quote (" ").

Example

Verify application password (Salesforce and Microsoft CRM)

Linux

```
./admin.sh verifypasswd myprofile application.password=abc
```

Windows

```
admin.bat verifypasswd myprofile "application.password=def"
```

Verify Database password

Linux

```
./admin.sh verifypasswd myprofile db.password=abc
```

Windows

```
admin.bat verifypasswd myprofile "db.password=def"
```
