

# describe

Describes all Source (Salesforce and Microsoft CRM) objects that the connection profile can see. This command return a Comma separated list of values as

<<Source Object>>,<<createable>>,<<updateable>>, <<querable>>, <<replicable>>

## Usage

```
admin describe <<profile>>
```

profile: connection profile setup in DBSync

## Example

```
Linux
admin.sh describe myprofile

Windows
admin.bat describe myprofile
```
